Dehuller with Husk Aspirator

DH+SN model

SuperBrix dehulling and classifying equipment incorporate modern designs and robust construction, integrating an innovative roller cooling system that guarantees efficient and high-capacity hulling. **Therefore, reducing broken rice and the wearing of rubber rollers.**

Guarantees efficient performance during the dehulling process of:

Paddy rice

Legumes

Roasted soybeans

An automatic and continuous operation, **providing great rice processing capacities with minimal roller wear.**

At present, we have two models of husk separators with closed air circuits, thus covering the needs of dehullers and pneumatic air separators to process multiple kinds of cereal. Rubber Roller Rice dehullers are of robust design, high efficiency, and technologically advanced.

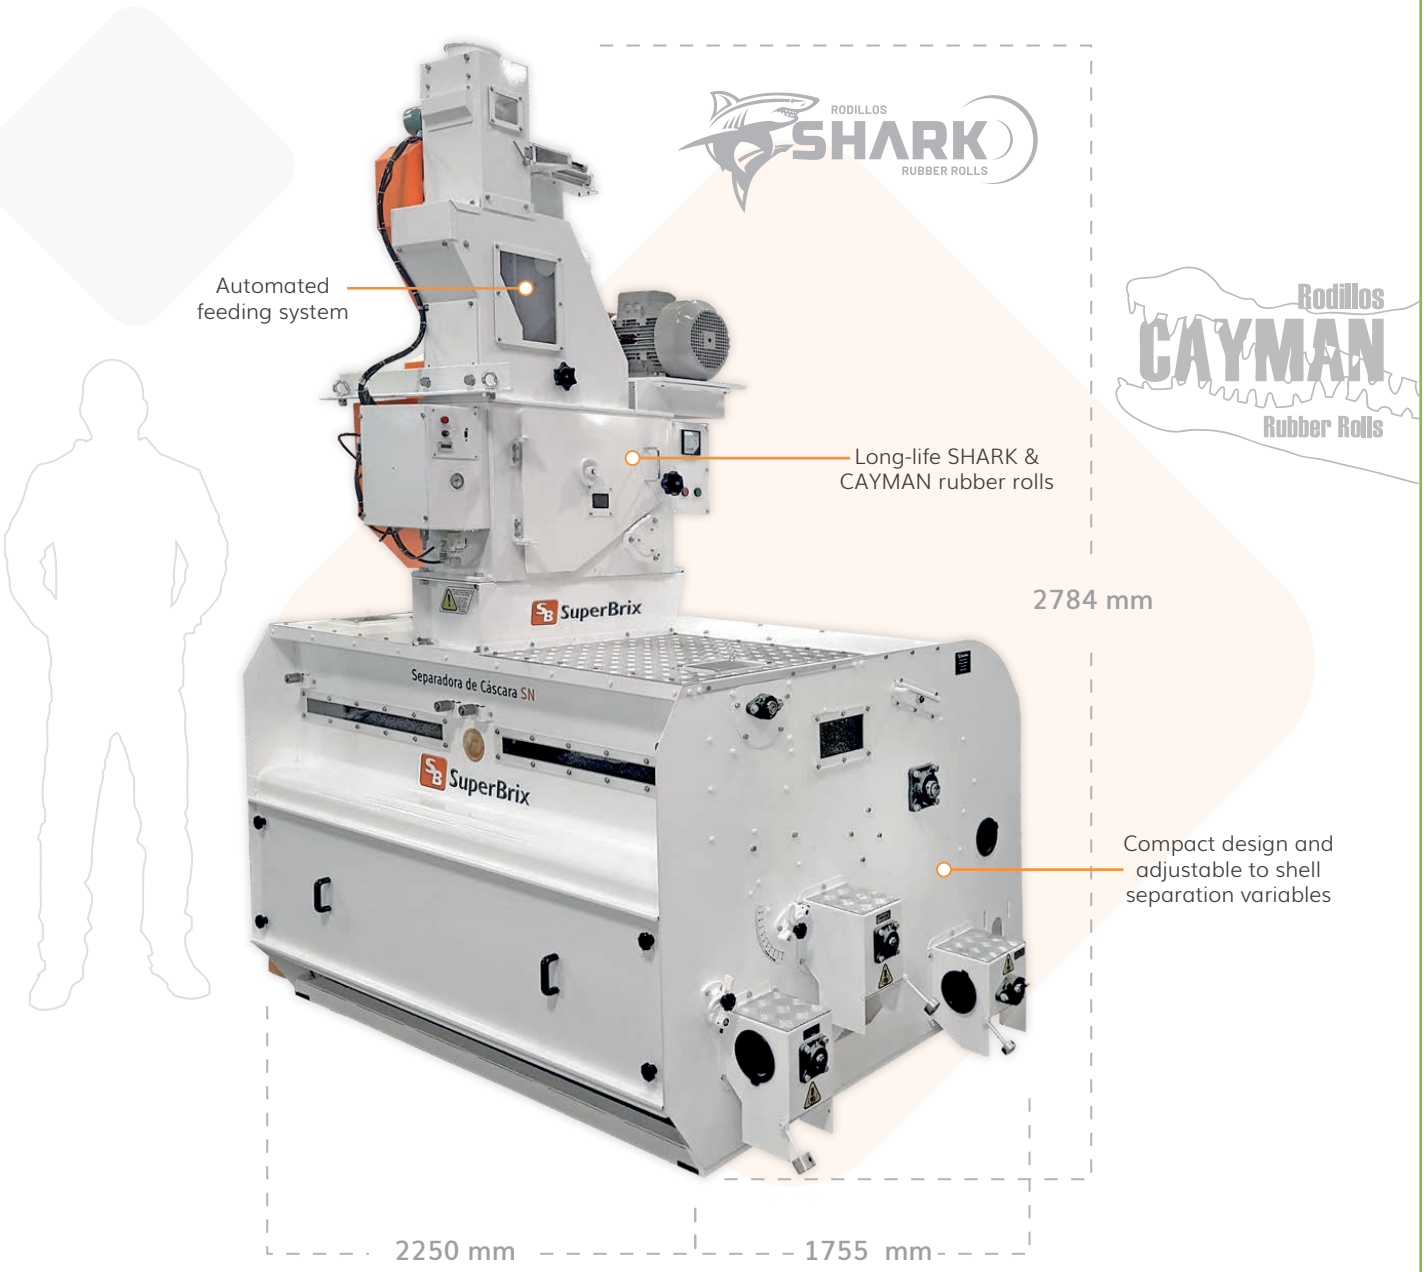
Rubber roller lifetime

Guarantees 30% longer life of the rubber rollers compared to standard dehullers, minimizing costs and optimizing the milling process.

Automatic dehulling operation.

Integrates an automatic feeding and control system to adjust the working pressure of rubber rollers, significantly reducing broken grain.



Technical Specifications DH + SN

Model	Capacity	Power
DH - 15	4.0 - 5.0 t/h	15 HP
SN - 3	4.0 - 5.0 t/h	7.5 HP
